

CHRISTIAN ALFREDO ARIAS BEJAR

Software Engineer | Backend & Full Stack Developer

Arequipa, Perú | [LinkedIn](#) | [Portfolio](#) | +51 927 478 889 | chris.29.01.44@gmail.com

SUMMARY

Software Engineer with professional experience in backend and full-stack development, specializing in .NET, ASP.NET Core, REST APIs, SQL Server, and PostgreSQL. Experienced in designing and implementing system integrations through APIs, defining interfaces and contracts with Swagger/OpenAPI, and building scalable, robust solutions.

Hands-on experience working with legacy and modern systems, JWT authentication, Entity Framework/Core, transactional workflows, concurrency control, testing, Git, and deployment of containerized applications to the cloud. Able to analyze complex systems, solve integration problems, and translate business requirements into technical solutions.

Complement my development experience with knowledge of applied artificial intelligence, prompt engineering, technical evaluation, and AI-assisted development workflows, with a focus on software quality, security, and reliability.

PROFESSIONAL EXPERIENCE

Web Developer — WebControl Systems

December 2024 – Present

Arequipa, Perú

- Develop and maintain web applications using .NET / ASP.NET, applying MVC architecture and SOLID principles for clean, scalable, and maintainable code.
- Lead migration and modernization of legacy systems (ASP Classic / ASP.NET) to .NET, improving maintainability and reducing technical debt.
- Design, model, and maintain databases in Microsoft SQL Server (SSMS), including optimization of SQL queries and stored procedures.
- Consume, test, and validate REST APIs using Postman as part of the integration and QA process.
- Apply version control and agile collaboration practices; focus on performance, incident resolution, and continuous improvement.

Back-end Developer — ALBIZIM

September 2023 – August 2024

Arequipa, Perú

- Developed and maintained APIs and backend services in C# and .NET, including RESTful and SOAP integrations with external systems.
- Diagnosed and resolved server- and database-related technical issues within .NET production environments.
- Implemented authentication and security measures for backend applications.
- Optimized backend application performance and documented APIs, processes, and technical solutions for the engineering team.

Web Developer — Santa Ursula

September 2022 – August 2023

Arequipa, Perú

- Built a web-based reservation system for rooms and services using .NET Framework, Blazor, and PostgreSQL.
- Implemented MVC architecture to ensure a maintainable and scalable application structure.
- Managed cloud deployment and hosting configuration using Heroku.

PERSONAL PROJECTS

RestoGest — Restaurant Management System (Freelance)

July 2025 – August 2026

Remote — Independent freelance client — Full Stack Developer

- Designed and built, solo, a full-stack restaurant management system covering table/order management, menu & inventory with automatic stock deduction and recipe-based costing, cash register with daily reconciliation, employee payroll, a profitability dashboard, SUNAT electronic invoicing, and thermal ticket printing.
- Built the backend as a REST API in ASP.NET Core (.NET 8) with Entity Framework Core over PostgreSQL, JWT authentication, and Swagger/OpenAPI documentation; designed a transactional order-closing flow with atomic stock updates and correlative reservation to prevent race conditions under concurrent orders.

- Built the frontend with React 19, TypeScript, Vite, and Tailwind CSS, including live table-status updates, a payments/billing modal, and Recharts-based reporting.
- Deployed the frontend on Vercel and the backend containerized with Docker on Railway, implementing health checks and environment-variable-based configuration.

HNCASE — Hospital Sterilization Center System (Personal Project)

Aug 2023 – Nov 12, 2023

Arequipa, Perú — Full Stack Developer

- Designed and built a full-stack web application to manage the sterilization workflow of a hospital's central sterilization unit (material tracking, cycles, and processing records).
- Developed the frontend in React 18 with Bootstrap for UI and Axios for API consumption, and built the backend and REST API in .NET.
- Structured the system end to end, from data modeling to UI, applying the same MVC and clean-code principles used in professional work.

EDUCATION

Computer and Systems Engineer: Universidad San Martín de Porres — July 2025 — Arequipa, Perú

English Studies: ASDI Sir Walter Scott — May 2015 — Arequipa, Perú — Current level: B2

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, SQL

Backend: .NET, ASP.NET Core, Entity Framework Core, REST APIs, JWT Authentication

Frontend: React, TypeScript, HTML, CSS, Blazor, Bootstrap, Tailwind CSS, Vite

Databases: SQL Server, PostgreSQL

Tools: Git, Postman, SSMS, Visual Studio, ESLint, Swagger/OpenAPI, Docker

Methodologies: MVC, SOLID Principles, Agile/Scrum

Other: API Integration, Debugging, Performance Optimization, Legacy System Migration

AI & DEVELOPMENT TOOLS

- Practical experience with AI-assisted coding tools: OpenCode, Claude Code, Antigravity.
- AI-assisted development workflows, prompt engineering fundamentals, and technical evaluation of AI-generated code.
- Comfortable reviewing, debugging, and optimizing AI-assisted code output.
